

iRover: Adding Mobility To Your PLC

Apple iPad connected to a Unitronics V350 PLC via iRover

PumpTech's [iRover](#) App turns your iPad into a mobile touch pad that allows you to interface with your control panel from anywhere in your plant. We call this "Onsite Mobility". It allows operators to move around freely while connected to a control panel's PLC. They can move out of inclement weather or move closer to the process being controlled. It's like taking your PLC with you.

[iRover](#) is flexible and can operate an unlimited number of PLC's. It can be set up with a local WiFi router that provides onsite mobility or go remote with a 3G modem or internet connection. The re-

mote connection allows you to connect to your control panel from almost anywhere. You can save hundreds of hours and thousands of dollars annually by not having to drive to and from your site. See the back side for connection information.

But, it doesn't stop there. [iRover](#) not only adds mobility, it also allows you to view important documents. With [docRover](#), our dynamic document management system, important documents such as schematics, O&M manuals and others pertinent to your equipment are just a touch away. They are updateable and can be shared with multiple users.

Standard Features:

- Big screen display (iPad)
- Real time control of the PLC
- Standard feature on most Hydronix & MeterMan control panels.
- Operates with all V350 PLC programs
- Stand alone app runs independently
- Available at the Apple App Store
- Local onsite mobility or total remote access
- One iPad controls unlimited PLC's
- docRover - Dynamic Document Management
